

STRUGGLING? WE CAN HELP!

Weight loss is difficult on a normal day but throw the holidays in the mix and you may find your struggle is compounded. While it does matter what you put in your mouth, do you wish it was easier to say no? Semaglutide (Ozempic) might be right for you! It delays gastric emptying making you feel fuller longer.

What do I get with your program?

We start by getting baseline lab work to check your kidney and liver function as well as an assessment and history to determine if you are a good candidate.

Your appointment with the nurse will include answering all of your questions, going over lab work and injection education as well as the first weekly injection. The injection needles are very small and cause minimal discomfort.

You will receive 3 additional pre-measured injections to administer at home which you will keep refrigerated along with alcohol swabs.

Each month you will return to the office to assess your progress and titrate your dose as needed. Lab work will be repeated every 3 months.

**Shed those pounds
for just \$300 a month.
Add B-12 shots for
\$35. In office
injections are offered
once/month
additional injections
\$25.**
